

CENTERS FOR OCEAN SCIENCES
EDUCATION EXCELLENCE

Workshop for Scientists

Education and Outreach Using Inquiry Methods

→ April 28, 2006, 8:30 a.m. – 1:00 p.m.

Woods Hole Oceanographic Institution, Clark Laboratory Rm. 507

You may have heard the educational jargon, “inquiry-based science education,” but what does it really mean? This workshop will examine scientific inquiry – how scientists “do” science – and focus on how you can bring your natural expertise in inquiry to education activities. If you are looking to meet requirements by funding agencies to demonstrate the **broader impact** of your research and want to address important science education needs, this workshop is for you.

The workshop will provide participants with:

- ◆ an overview of the research on inquiry teaching and learning,
- ◆ an introduction to national standards for inquiry-based K-12 science education, and
- ◆ real-life examples of how inquiry looks in action.

Education and outreach professionals will be available to discuss specific ways you can get involved in E&O programs.

→ Online pre-registration is required:
